6. UML Package Diagram

Modular Package Decomposition & Layered Architectural Separation

ARCHITECTURAL & STATUTORY CPC HIGHLIGHTS:

- Layered Separation: Routers (api.v1) handle HTTP, Schemas validate DTOs, Services enforce business logic.
- Domain Models (models): Cleanly separated domain ORM entities with zero coupling to HTTP request handlers.
- Asynchronous Workers: Countdown daemon executes independently of the request-response cycle.
- Frontend Modularity: Client components cleanly decoupled into UI views, context providers, and API services.
